

All of your online services hang on the reliability of your DNS. With the Dynect Platform, you'll never have to worry about that again.

Sign up today, and you'll...

Minimize downtime

With **six data centers on three continents**, the Dynect Platform network could survive disruptions of yet unknown scale. Anycast and custom software ensure **fast and reliable resolution** regardless of location.

Eliminate overhead

Dynect Platform's interface is **built for modern teams**. It features granular permissions and **works on almost any platform**, even on-the-go.

Secure your data

A misconfigured DNS server can open the door to your entire network. The **Dynect Platform servers do DNS and only DNS** so you know they are set up and patched in just the right way.

Protect your image

Dynect's **failover and load balancing** ensures your online presence so your users won't be affected by outages.

Get expert advice

Your Dynect Platform Concierge will help you find the best setup, the best services and the best integration procedures with your existing IT backend. **We're available to you 24/7.**

Cut down on costs

Because the Dynect Platform network is optimized for DNS delivery, it scales unlike most corporate systems. That gives you **tremendous power at a fraction of the cost** of a typical in-house solution.

What is the Dynect Platform?

The Dynect Platform is the latest offering in Enterprise DNS solutions. It is built upon Dynamic Network Services' experience in running one of the world's finest consumer services, DynDNS.com. The Dynect Platform combines this operational experience with the newest technology available to provide an easy to use, robust, and resilient DNS service system.

With the Dynect Platform, you get an easy-to-use DNS management system via the Web. A search function allows you to jump between different sections of your zones quickly and easily. The Dynect Platform supports multiple users and allows administrators to set various permission levels for different users by zone, label, or record. Only users with the appropriate credentials will be able to change your delicate DNS settings.

The Dynect Platform allows you to take advantage of the DNS' built in Load Balancing and Failover system. We'll monitor your servers remotely and correct your configuration if we notice a problem. We'll also send you a notification so you can get your system back online as soon as possible.

How does DNS affect my business?

Everything your business does online, from serving web pages to relaying e-mails, relies on DNS to find its appropriate server, database, or information store. If your DNS is down, your entire Internet presence is down. Why invest so much time and money into these services only to have your DNS fail? The Dynect Platform guarantees 100% DNS resolution, so you'll never have to deal with a DNS outage again. Visit www.dynect.com and sign up today.
